

Doors and windows installation

1 step: Firstly from outside you have to put the window evenly the wall, in order to set the window/ door strip pos. 046 (pos. depends on the window/door size).According to the picture.

Pos. 046

2 step: pos. 046 must be screw. According to the picture.

3 step: pos. 049 must be put in the place from inside step by step. Firstly you have to put down and up, then in the both sides. According to the pictures.

4 step: pos. 046 must be screw from inside. According to the picture.

ATTENTION:

A decorative board between the windows (doors) can be additionally screwed, from inside, if needed. Pos. 071b for door and pos. 071, pos. 071a for window.

Windows can be opened in one of two ways: firstly wide side to side action with window fully open. Secondly by means of a ventilation catch in order to allow a small amount of airflow into cabin.

Ventilation – please ensure that the window catch lever is in the right hand position.

Slowly release the catch at the top of the window.

The window will then tilt slightly inwards at the top for ventilation.

To close the cabin doors please push the door handle from the horizontal position to vertical and back.

This will close the door for locking purposes.

To open the cabin door, unlock and then depress door handle downwards from horizontal to vertical pointing towards the ground. The cabin door will then open.

Please note:

Wood is a natural material, which comes with differing textures and colour nuances. These form part of the appeal and natural attraction to this product but also mean aesthetic variations.

Complaints:

If a cause for complaint should arise please follow this procedure:

Inform your retailer and return your control list, describing the problem and making note of any parts nos. that may be damaged. As soon as we receive notification of a complaint we shall do our best to resolve the matter as quickly as possible.

Guarantees are limited to the replacement of incorrect materials.

We trust you enjoy your Log Cabin.

LOG CABIN SHINGLE TILE INSTRUCTION

ATTENTION:

We are not responsible for water leakages due to incorrect tile installation or improper preparation of the roof deck. Please therefore read these instructions carefully. If you have any installation questions please ask us before starting.

Sometimes a small deviation in colour of the tiles occurs between tiles in the same or different packs. This is not a defect of the material and is actually designed to increase the decorative beauty of the completed roof. In order to reduce colour difference during installation of the tiles, it is recommended to mix tiles from packs at random in order to create a mixed colour effect.

Storage:

Full pallets of tiles cannot be stored one on top of the other, otherwise this can compress the tiles into sticking to one another before use. In order to avoid shingles sticking to each other in a pack they should be protected from direct sunlight and any direct heat source. Each pack should be bent and shaken before opening, this helps to separate the shingles from each other.

It is not recommended to walk on the roof in hot/sunny weather because the cover might be damaged. Special ladders should be used for this purpose.

Usage of materials for roofing cover:

Each pack of bourne or hexham tiles contains 3 m² of tile coverage (including overlapping). Each pack of ridge tiles contains 5m² of tile coverage (including overlapping).

When calculating the amount of materials needed for roofing cover it is necessary to evaluate the quantity of tiles required depending on the complexity, degree of slope and size of the roof. Please remember to calculate extra tiles required for wastage (between 5 – 15% extra) as it is always better to have too many than too few tiles. Extra spare tiles, if stored correctly, can be used to repair any areas of damage in the future.

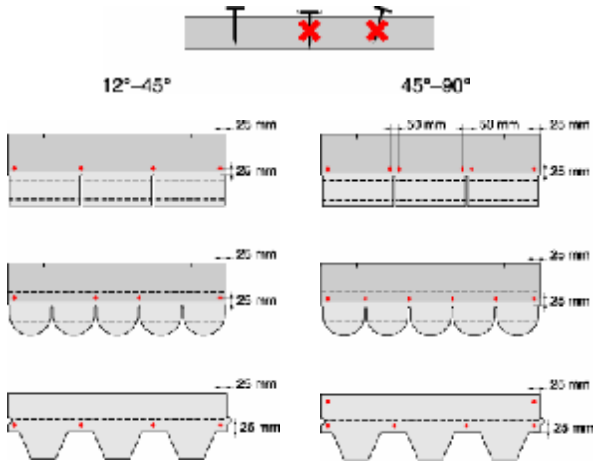

Installation of bitumen shingles: Initial row (tiles of ridges/cornice):

Ridge/cornice tiles or the usual tiles (with the jagged edge cut off) are used for the initial row of tiles along both the eaves of the roof as well as the pitched cornice at the top.

The silicon film should be removed from the under side of the tile prior to installation.

Every tile should be nailed to the roof boards with wide headed galvanized roof tack nails. The number of nails depends on the pitch or slope of your roof. It is very important not to over hit the nails. They should be nailed in such a way that the head of the nail head is flush with the tile and not below the surface. The head of the nail should not puncture the surface of the shingle tile.

The nails are put 2 – 3 cm from the edge of the tile. Picture on the left indicate the number of nails needed and where they should be applied at certain roof angle. The picture shows the topside of the tile, and the dotted line indicates the place of the adhesive bottom layer.

Ridge/cornice tiles should be cut into three parts at the places of perforation and laid in a straight line with an overlap of 3 – 5 cm. They are fixed with two nails on each side of the slope.

Installation should be performed against the prevailing direction of the wind.

ATTENTION: if ridge – cornice tiles are installed at the outside temperature lower than 10°C it is recommended to bend them on a heated 10 cm diameter tube in order to avoid cracks. (See the picture on the left)

Ventilation:

The durability of the roof construction is longer if the roof has proper ventilation, especially over the usable attic.

Tile Patterns:

Please make sure that the individual tiles are NOT overlapped to cover the darker colour section. Please refer to the pictures for the correct spacing of tiles. If you assemble the tiles with a larger overlap than recommended you will not have enough tiles to complete your roof. We provide the correct quantity of tiles in order to cover your roof according to correct assembly.

We strongly recommend to use wide headed (up with 15-19 mm long) nails to fix the bitumen tiles.

If you are going to put the tiles at lower than +15 degrees outside temperature, please preheat black sealing belt zones or use extra mastics to ensure waterproofing. In this case also recommend to keep tiles in warm temperature (inside) for 24 hours before installation.

The cost of extra tiles and delivery will be paid for by the customer and not Eurovudas ltd.

HEXHAM TILES PATTERN

BOURNE TILE PATTERN

If you have any questions about the installation process of your tiles please call to ask before starting.

ATTENTION:

We are not responsible for water leakages due to incorrect tile installation or improper preparation of the roof deck. Please therefore read these instructions carefully. If you have any installation questions please ask us before starting.

Attention: If in the list of details you found 4 peaces rhombes, two must be set at the front and at the back of house and the last two on the roof strips joint. If you found just two rhombes in the list of details such being the case you must put them at the front and the back of the house (according to the picture).

CONTROL LIST NUMBER:

We want to thank you for this wooden garden house purchase. This house was manufactured using the highest technology. The quality was being checked at all times to a high standard. While packing, the number and quality of sections and parts are checked at different stages of manufacture, therefore keeping any problems to an absolute minimum.

However, if it happens, the provider guarantees to replace any faulty parts. If you have any problems please present the documents of your purchase and the Control List to the seller. Please provide a description of the needing replacing.

For client: Please send us digital photos of the defect parts too, if possible.
